Specially made Ergo Support

The Ergo Support has been developed especially for microscope users. Resting your arms close to your body takes away the strain from your back, shoulders and neck. It is a perfect way to work ergonomically, relaxed and supported.

Having good support for your arms is pivotal when working with a microscope. The unique armrest system makes it possible to position the armrests around your torso within a second, without using knobs or handles. With the Ergo Support you sit comfortable and work healthy.

Technical Specifications

- Height adjustment : 52 – 71 cm (foot operated gaslift optional)
